

# Nairabet Bet Combinations (Combo)

## What does "FOUR-FOLD" mean?

A Four-fold bet is a kind of accumulator that works with 5 different event selections.

When you choose 5 different events and you make a choice of four-fold as accumulator, the system automatically arranges all 5 events in a number of places the combination of any 4 of the 5 events.

E.g

Games A, B, C, D, and E

The system now arranges your four-folds thus:

$A*B*C*D$  ....Odds product for all 4 selections multiplied by your stake = winnings for this combination

$A*B*C*E$  ..... Odds product for all 4 selections multiplied by your stake = winnings for this combination

$A*B*D*E$  ..... Odds product for all 4 selections multiplied by your stake = winnings for this combination

$A*C*D*E$  ..... Odds product for all 4 selections multiplied by your stake = winnings for this combination

$B*C*D*E$  ..... Odds product for all 4 selections multiplied by your stake = winnings for this combination

Please bear in mind that your stake will be charged separately for each combination so if you enter N50 in the stake box, your total stake would be N250 (N50 X 5 possible combinations)

You must get the predictions for all 4 games correctly for you to get a return.
